

for the game, which translates userA

actions into operations on the model. Our controller

resides mainly in the `Model` class, although it also uses the GUI class to read keystrokes.

expected to know or understand this design pattern on exams or future projects.

Basically this means that the

changes to the `Model`. Instead, the `Controller` itself as an instance of the `Controller` in `wurfen`.

One must not touch the class nor manipulate the instance variables.

Enums can be assigned with syntax like
